Bounded post-projection recheck at specified alpha; internal temperature only
Open boundary / full NS / steady state require separate checks
Actual candidate path: primitive tangent, conservative recovery
Out-of-range CV
Out-of-range assessable Riemann face
Count (blocked interfaces remain unassessed)
Preview round (0 = free candidate)
Accumulated original rows
Finite-step-required faces
Count (no rank-based row removal)
Preview round (0 = free candidate)
